Adobe Premiere Pro CC that enhances and rescales your B-roll for a more cinematic look. B-roll is short, action-oriented footage that you often see at the beginning and end of a movie. It's also a term that covers a number of different types of material, such as scripted television, film or documentary segments. B-roll takes up a lot of space in any project, so trimming, optimizing and simplifying it makes a big difference in the final output. B-roll needs to be a certain size in order to work well and when you make your cuts in Premiere, you can lose up to 8-10% of footage depending on your delivery format. The resulting gaps are often easier to miss than when resizing, therefore it's better to trim and resize it all at once. B-Roll Resizer Pro handles B-roll in a different way than other applications out there. Unlike traditional resizing, B-Roll Resizer Pro rescales the original footage to a new resolution so you can then simply trim it without losing any quality. Rescaling happens in real-time, which means

you don't have to wait for the Premiere project to load to a certain point before you apply the changes. The main benefit is that you can use your computer in an uninterrupted workflow. You can also add multiple effects to the footage and have Premiere automatically scale the clip and retain them all. If you're a busy filmmaker, this could help you trim your B-roll without any problem. The plug-in is compatible with the latest versions of Adobe Premiere Pro CC and Adobe Media Encoder CC, which means it can be used with projects made with Premiere Pro CC 2018, Premiere Pro CC 2017 or Media Encoder CC 2017.
