Rotating sand filters and grit chambers are widely used in cities and municipalities for treating, and in some instances purifying, storm water runoff and sewage effluent. They are also used as a pretreatment device prior to spray irrigation, and in wetland applications to cleanse wastewater of oil spills or other pollutant sources before discharge. In general, sand filters and grit chambers are of a batch-type, whereby the process is carried out by introducing the effluent into an upper chamber and allowing sand and/or grit to collect in a lower chamber for subsequent removal. The effluent is then pumped through the chambers, and the upper chamber, or chamber of either

Microsoft's head of partnerships, Lisa Brummel, has said that the Xbox One will be "more powerful than the Wii U," and claims that the reason why Nintendo's console hasn't done well is because of a "failure in messaging." Speaking with Edge, Brummel said, "I do have a question for the Nintendo dev team. Is it really our GamePad that makes the Wii U great, or is it the Wii U that makes the GamePad great?" "When you look back at the Wii U, you'll see that a lot of the excitement and the buzz was around the Wii U and not the GamePad. "It's just really a failure in messaging. They're saying 'Oh yeah, it's our GamePad.' But it's a lot more exciting and cool and important and powerful to play games on Xbox One." she added.
